5: Insurance Claim Request & Processing Management - Zoho Creator Reports Suite

Aim:

To design and build a complete suite of Reports in Zoho Creator for the "Insurance Claim" application, demonstrating the correct usage of all nine Report Types available in Zoho Creator.

Reports Used Overview

Report Type	Report Name
List View	All_Claims_List
Spreadsheet View	Claims_Spreadsheet
Kanban View	Claim_Status_Kanban
Calendar View	Incident_Date_Calendar
Map View	Claimant_Location_Map
Timeline View	Claim_Activity_Timeline
Pivot Table	ClaimType_By_ClaimantType_Pivot
Chart View	ClaimType_Distribution_Chart
Summary View	ClaimType_Amount_Summary

Detailed Report Descriptions

1. All_Claims_List (List View)

- **Purpose:** Default landing report for the Claims Processing Team, displaying every claim in a clean, searchable list.
- **Features:** Columns for Claim ID, Customer, Policy Number, Customer Email, Claim Date, Claim Type, Claim Amount and Claim Status; search bar and column-level filters for Claim Type and Claim Status; sorted by date with the most recent claim first.

2. Claims_Spreadsheet (Spreadsheet View)

- **Purpose:** Used daily by the claims team to review and update claim details quickly in a grid layout.
- **Features:** Editable grid with dropdown fields for Customer, Policy Number and Claim Type; only status-related columns are editable while all other columns stay read-only for data integrity.

3. Claim_Status_Kanban (Kanban View)

- **Purpose:** Gives the claims manager a visual pipeline of how claims move through processing stages.

- **Features:** Cards grouped by Claim Status (Pending, Approved, Under Review, Rejected); each card shows the Claim ID and Claim Type; dragging a card to another column updates the Status field automatically.

4. Incident_Date_Calendar (Calendar View)

- **Purpose:** Used by the fraud-analysis team to spot unusual clustering of claims around specific dates.
- **Features:** Month, Week and Day views; claims are plotted on their date with a count shown in each day cell; clicking a date drills down to the claims for that day.

5. Claimant_Location_Map (Map View)

- **Purpose:** Used by surveyors to plan site visits and identify regional incident clusters.
- **Features:** Geocode-enabled pins plotted from the residential address; pins colored by Claim Type.

6. Claim_Activity_Timeline (Timeline View)

- **Purpose:** Lets management monitor claim volume trends and forecast staffing needs.
- **Features:** Claims plotted along a time axis by submission date, with week and day views highlighting peak filing periods.

7. ClaimType_By_ClaimantType_Pivot (Pivot Table)

- **Purpose:** Used by the branch manager to see whether claims are mainly first-party or third-party.
- **Features:** Rows: Claim Type; Columns: Claimant Type; Values: Count of Claims; blank cells shown as zero; grand totals provided.

8. ClaimType_Distribution_Chart (Chart View)

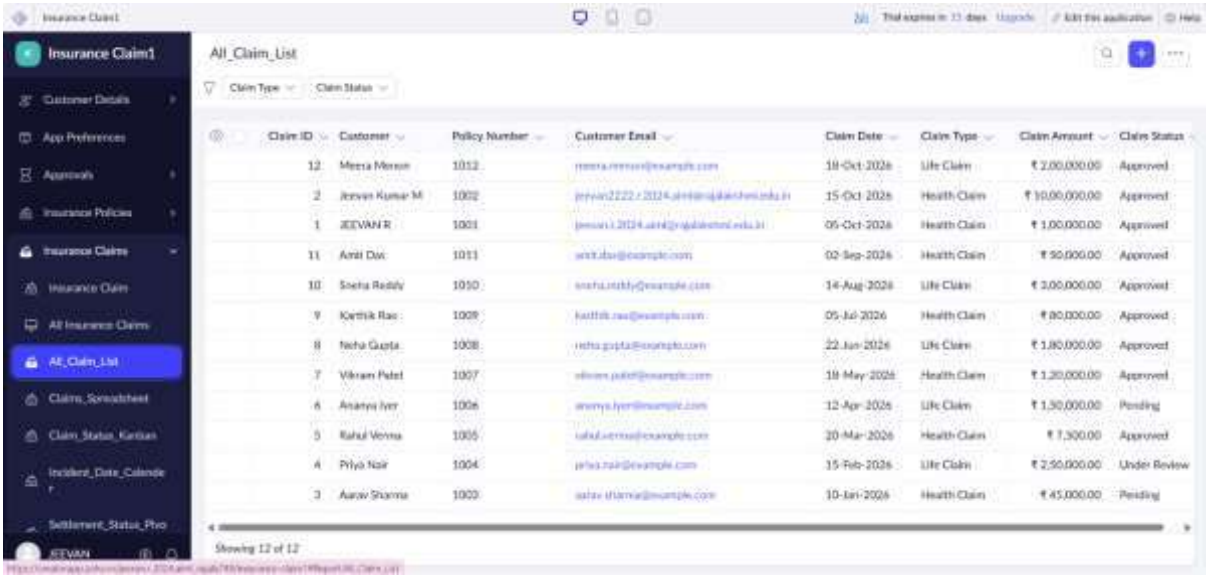

- **Purpose:** Used in management reviews to compare claim volume across insurance categories.
- **Features:** Pie chart with Claim Type segments and Count of Claims as values; refreshes automatically when a new claim is submitted.

9. ClaimType_Amount_Summary (Summary View)

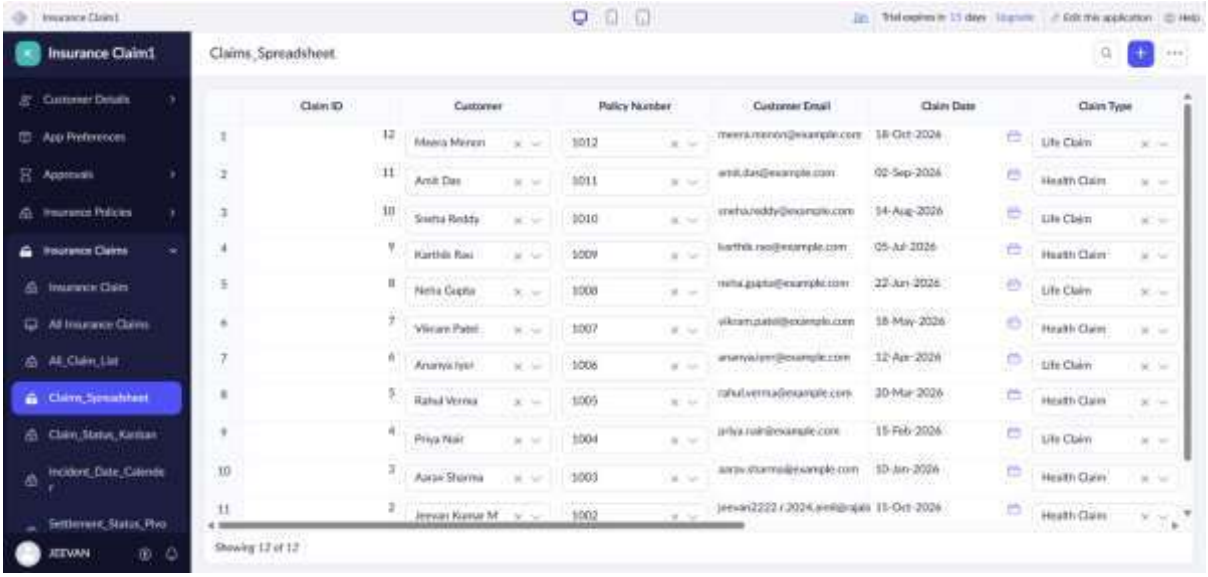

- **Purpose:** Used by senior management and finance to understand financial exposure per claim type for reserve planning.
- **Features:** Grouped by Claim Type with Count of Claims, Sum and Average of Claim Amount; currency formatted in INR (₹) with two decimals.
