7. Integrating Zoho Creator with Zoho CRM via Connections and APIs

Aim

To design, develop, and integrate a custom Insurance Claim application in Zoho Creator with Zoho CRM using authenticated connections and automated workflow actions, enabling seamless data synchronization upon successful submission of an insurance claim.

Procedure

1. **Application Setup:** Log into the Zoho Creator platform and create a new application titled Insurance Claim1.
2. **Form Design:** Construct the application forms: Customer Details (Customer Name, Gender, Email, Date of Birth, Mobile Number, Permanent Address), Insurance Policy, and Insurance Claim, so that every claim is linked to a customer and a policy.
3. **Integration & Authentication:** Navigate to App Preferences > Manage Integrations. Select Zoho CRM and establish a secure OAuth connection. Verify that the connection badge displays Connected.
4. **Workflow Configuration:** Go to the Workflow tab, select the Insurance Claim form, and create a new workflow named Claim Submission Workflow under the trigger event Created > Successful form submission.
5. **Action Mapping:** Add an integration action (Push data to Zoho CRM) inside the Execute without condition block to push claim data directly to Zoho CRM, then toggle the workflow status to Enabled.

Screenshots

Result

The Insurance Claim application was successfully created and integrated with Zoho CRM. Whenever a claim is filled out and submitted in Zoho Creator, the workflow triggers automatically, executing the push action to synchronize the claim details into Zoho CRM.
