EXPERIMENT 9: AI-ASSISTED FEATURES & ZIA ANALYTICS IN ZOHO CREATOR

Lab Record | Application: Insurance Claim Application

1. Aim

To explore and configure built-in artificial intelligence capabilities (Zia) and advanced analytics features within Zoho Creator for intelligent data querying, predictive forecasting, and automated insights for the Insurance Claim Application.

2. Overview

Zoho Creator integrates Zia (Zoho's conversational AI and analytics assistant) to empower low-code developers with natural language processing, automated chart creation, anomaly detection, and predictive analytics.

Feature / Capability	Functional Description in Zoho Creator
Zia Voice & Chat	Allows users to query application data and trigger reports via conversational commands.
Smart Analytics	Automatically suggests metrics, pivot tables, and visual charts based on dataset patterns.
Anomaly Detection	Flags irregular data entries, performance delays, or transaction spikes using machine learning.

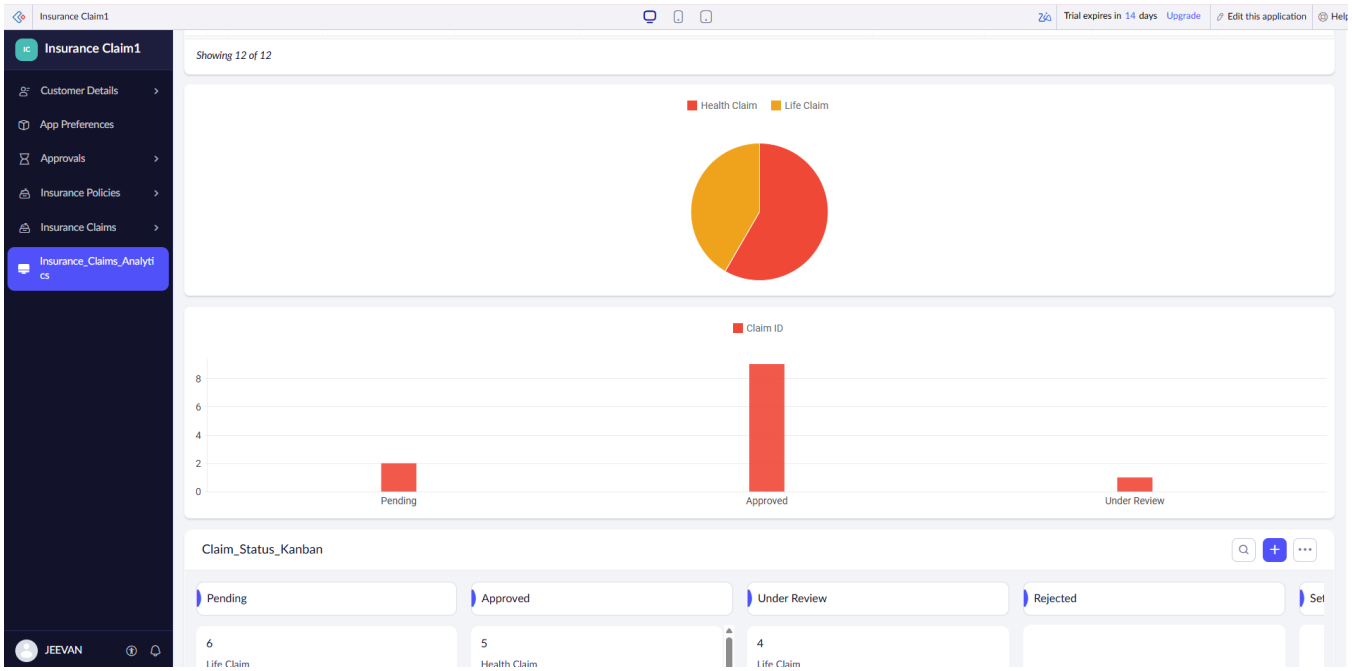

3. Procedure

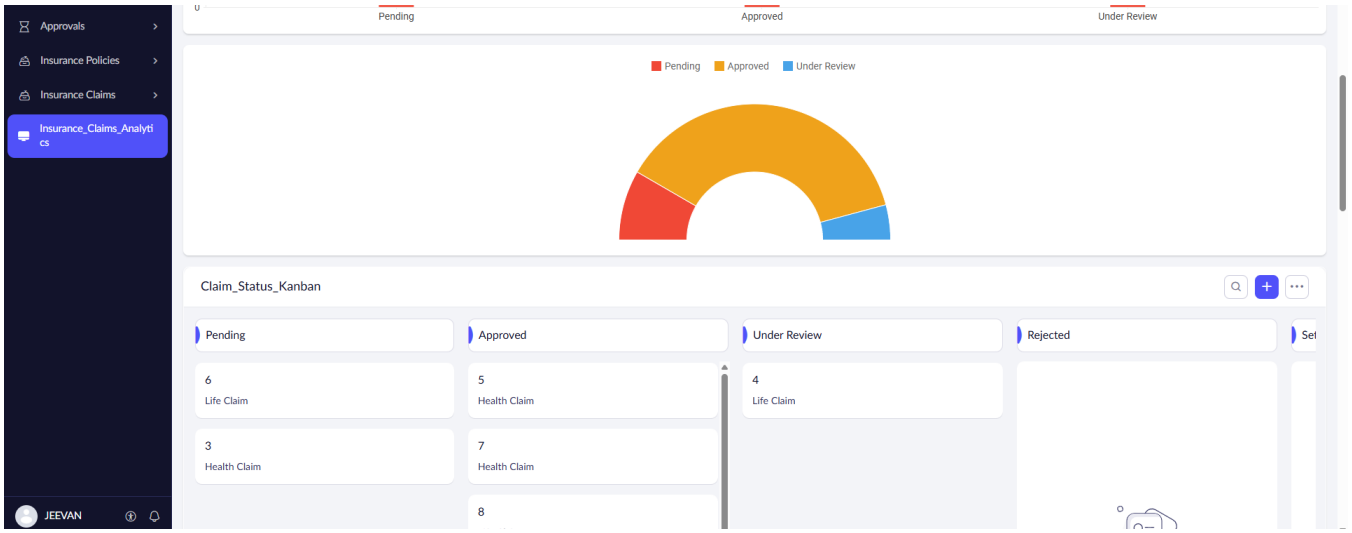

1. Enable Analytics & Zia: Open your Zoho Creator application workspace, navigate to the Analytics module (Insurance_Claims_Analytics), and ensure Zia AI assistant integration is active for your target data tables.

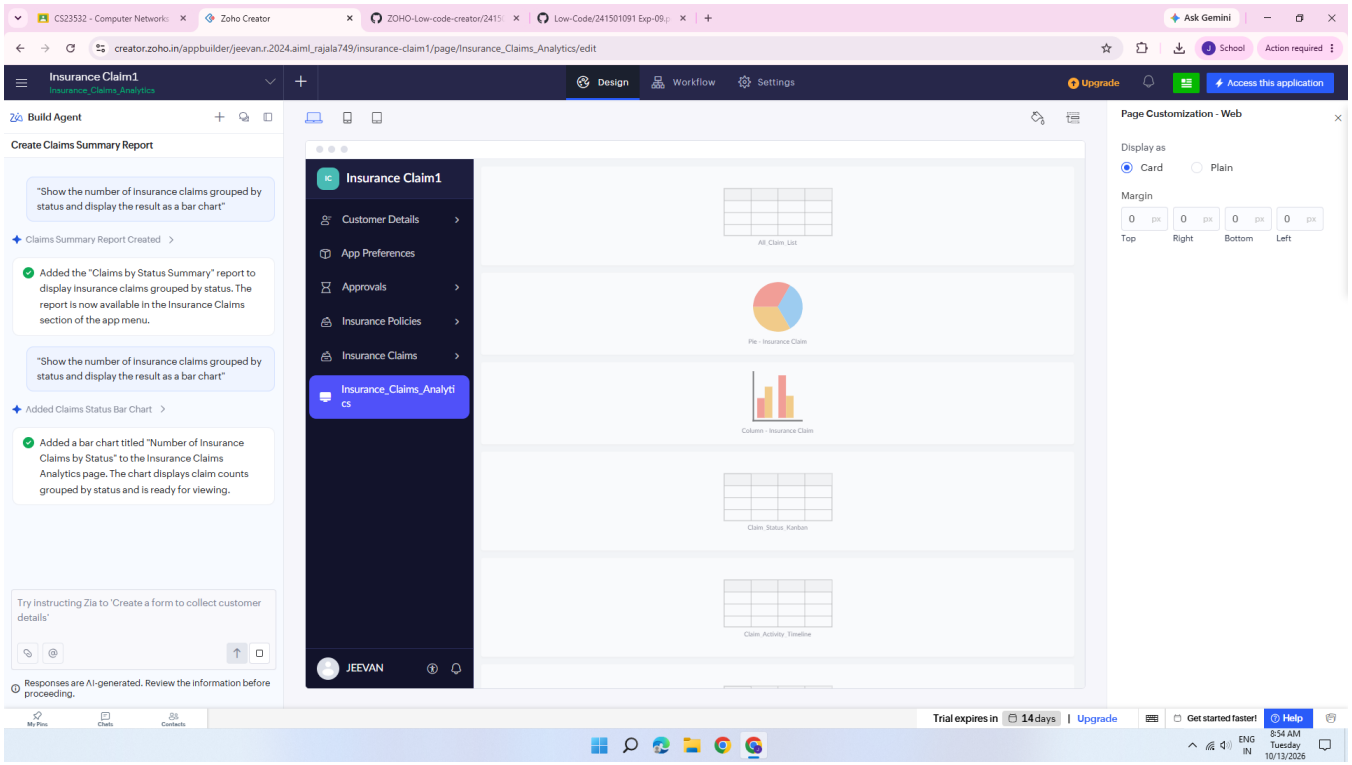

2. Generating AI-Driven Dashboards: Use the natural language query prompt box to type commands like "Show the number of insurance claims grouped by status and display the result as a bar chart" or select Zia's automated dashboard recommendations.

3. Configuring Predictors & Insights: Set up data prediction models and charts (such as Claim Status Bar Charts, Pie Charts, and Kanban views) to forecast future trends and track real-time claim processing based on historical application records.

4. Screenshots

Result

The experiment successfully demonstrated the integration of AI-driven analytics using Zia in Zoho Creator, proving its efficiency in delivering automated business intelligence and natural language data exploration for insurance claim management without manual script coding.
